BIOGRAPHICAL SKETCH

I am a **Behavioural Neurologist** that has trained at the interface between *Neurology & Psychiatry*, using methods from the field of **Cognitive Neuroscience**. My ultimate career aims are to study the brain mechanisms that are responsible for a series of cognitive and emotional problems in a broad range of neuro-psychiatric disorders. I also study how individual differences in personality traits in healthy people arise from variability in brain function and anatomy, and how this relates to neuro-psychiatric illnesses. For instance, I consider the neural underpinnings of personality traits such as neuroticism, impulsivity, and aggression and their role in juvenile antisocial behaviours and neurodegenerative disorders affecting elderly people (i.e., the fronto-temporal lobar degeneration spectrum of disorders). Improving our knowledge of the neurological roots of personality is not only of interest theoretically but has also the potential to lead to new approaches to assess and treat complex neuro-psychiatric disorders.

I have 15 years of research, clinical, and teaching experience in cognitive neuroscience and considerable expertise in advanced techniques commonly used in experimental as well as clinical neurology and psychiatry (e.g., *functional and anatomical connectivity approaches, questionnaire measures, neurological or psychiatric assessments, psychological task design, analyses of error patterns, pharmacological manipulations of neuro-chemical systems, and design & implementation of phase II clinical trials in neurodegenerative disorders*).

I am author and co-author of 108 peer-reviewed manuscripts (1 in Press) in important international journals including **Brain, Biological Psychiatry, Neurology, JAMA Psychiatry, NeuroImage, Journal of Neuroscience, and Science**. For bibliometric indices see [Google Scholar](#)
